

EOMEGA BROCHURE

FACILITIES

EOMEGA GROVE is located on three hillside acres in the Santa Monica Mountains near Los Angeles. Improvements include the residence of the director; a library containing some 5000 books and journals; workshops for graphics, art, and woodworking; classroom areas; garden plots; and grove of California "Coast Live Oak" trees.

EOMEGA GROVE is an education's research community in the process of incorporating as a not for profit organization in the state of California. It has been formed in order to develop alternative methods of education and work. EOMEGA Grove activities include conducting research; sponsoring seminar for the adult community creating learning environments for the young; maintaining information files on ecology, technology, and social phenomena; designing tools and building supplies to be manufactured from recycled materials; experimenting with composting techniques in mountain areas.

One of the principal challenges of the remaining years of this century is to explore, generate and validate alternative modes of community, work, education and individual growth. In the generation of alternatives, we must encounter face to face many of humanity's deepest and oldest core beliefs, beliefs that in shaping out ideas of ourselves and the world have also intervened in our destiny. The periodic examination of core beliefs is an essential part of man's search to discover his role in the cosmos, a search that began before the first tool was fashioned or the first poem was uttered. In our search we must identify and protect that which nurtures humanity, identify and restructure that which can be adapted to the service of humanity, and identify and dismantle that which threatens or oppresses humanity. Although this search has led to plateaus of partial attainment where mankind properly paused for reintegration, there may never be a final summit. If not, dedication to an unending search is not the entrance to a Sisyphian hell, but rather the discovery of that blend of confidence and humility that turns our own pulse to the pulse of the universe. Ultimately in the process of searching for his cosmic role, man will have created one-the role of the searcher. This role is certainly dignified enough and challenging enough for man until his true role be found. The role of the searcher is indeed dignified enough and challenging enough for all time, if no other role is ever found.

EOMEGA-the bridge from the last of the old to the dawn of the new-is not an institution. It is not a philosophy. It is a commitment to the Search.
